DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Lee et al (6,375,321).

Lee et al discloses in Figs. 1-7, column 4-5, a device for coupling spectacles and clip-on sunglasses wherein the recessed socket (200,300) is made of a soft magnetic material such as iron-based metal, nickel-based metal or stainless steel.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zelman (6,343,858) in view of Mauch (6,170,949).

Art Unit: 2873

Zelman discloses, in Figs. 1,2,12,13, the claimed invention, but his recessed sockets are not provided with metallic, non-magnetized bottom and side walls as claimed by the applicant. In the same field of endeavor, Mauch discloses a spectacle frame assembly comprising a primary spectacle frame and an auxiliary spectacle frame wherein the recessed sockets provided with metallic, non-magnetized bottom and side walls for the purposes of attaching the auxiliary spectacle frame to the primary spectacle frame. Mauch also discloses, in column 5, lines 53-58, the recessed sockets provided in either one of the auxiliary frame and the primary frame. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the recessed sockets in the Zelman device in light of Mauch's teachings for the same purpose of attaching the auxiliary spectacle frame to the primary spectacle frame disclosed by Mauch as the same as the applicant does.

5. Claims 10-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al.

Lee et al discloses the claimed invention as discussed above. He also suggests in column 5, lines 44-46, column 7, lines 8-10 the recessed socket 30 and the magnet inserting member 301 can be substituted with each other. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the Lee et al device by providing the arm of the auxiliary spectacles with recessed socket as suggested by Lee et al to obtain the same device as claimed by the applicant in claims 10-17.
